AT&T Business

AT&T Dynamic Defense™ simplifies network security

Get built-in threat protection with your connectivity solution

Features

- Industry-leading AT&T threat intelligence
- 24/7/365 network monitoring
- Same-day deployment in minutes
- Use security policies recommended by AT&T Chief Security Office or deploy your own
- AT&T Dynamic Defense charges appear on existing ADI bill with no term commitment

Benefits

- Enterprise-grade network security prevents threats from reaching your network
- AT&T Dynamic Defense shield may improve network performance
- Consolidates security products and services into your connectivity solution with no added equipment
- Streamlined and cost effective compared to multiple add-on security solutions

As you adopt as-a-service models, grow your business, and extend your network to the cloud, your network's attack surface grows. Add-on solutions can be effective, but they add complexity and can strain your resources. AT&T Dynamic Defense helps you stay ahead of ever-evolving threats and have the right policies and protections in place.

Built-in network protection

AT&T Dynamic Defense is the first network solution with threat protection that's built in. It's embedded in our global network infrastructure, so it detects threats, filters malicious traffic, and executes security controls before the data reaches your network. As the first line of defense, AT&T Dynamic Defense significantly reduces the number of threats that can impact performance or compromise your network.

Simplified security

AT&T Dynamic Defense combines multiple security features into a single capability that's embedded with your connectivity solution. There's no separate equipment to buy and no hardware needed. You can say goodbye to add-on security solutions from multiple providers and the extra expense, contracts, and maintenance that follow.

Unrivaled threat protection

Backed by security experts

AT&T Dynamic Defense employs the same intelligence we use to protect our own infrastructure. Our network is built on deep security expertise. Today our network carries over 1/3 of the world's internet traffic, giving us insights into new threats as they arise and the ability to immediately block malicious traffic from reaching your network. Our threat intelligence is powered by machine learning (ML) and artificial intelligence (AI), so it adapts to the evolving risk landscape. Now, AT&T Dynamic Defense extends our best-in-class threat protection all the way to the edge of your network.

We secure your network like we secure our own—with innovative security tools to detect and prevent cyber threats.
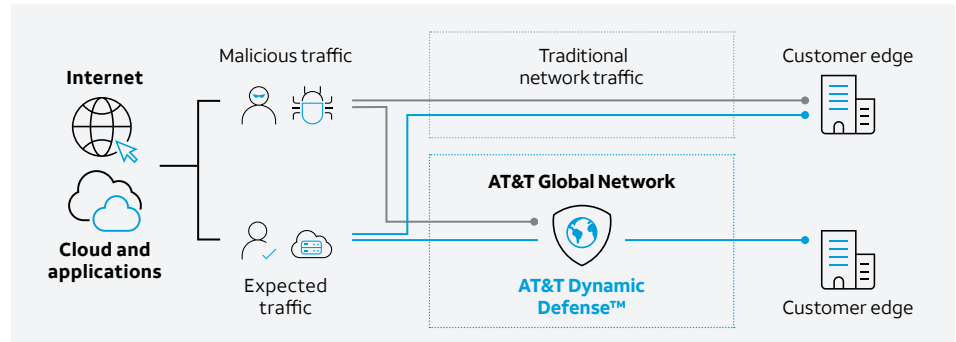

Security for a modern network

AT&T Dynamic Defense offers a range of features to help protect your users, data, and applications on premises, remotely, or in the cloud.

- **AT&T Dynamic Defense shield** powered by AT&T's threat intelligence detects and automatically blocks known malicious traffic to and from your networks. It mitigates risks and malicious attacks. It helps make sure your network is only accessible to those who should have access.

- **Configurable Stateful Firewall, Geo Filtering, and Web Filtering** enable you to apply policies in your network. Use AT&T Chief Security Office recommended policies or your own custom policies. Either way, policy management is centralized for a smooth and easy experience.

- **Application-based Policy** provides granular security controls based on known business applications.

- **Reporting and Logging** capabilities aid in security analysis and can provide valuable insight into the threats your business faces. Shows mitigated risks, intrusion attempts, and blocked IP addresses in a visual format.

- **Version Control** keeps track of multiple versions of security policy configurations that can be restored quickly if a disruption occurs.

AT&T Dynamic Defense integrates virtually seamlessly with your AT&T connectivity, and it's simple to manage. Just add the service to your AT&T Dedicated Internet service. It's turnkey, so your world-class threat intelligence and monitoring capability is deployed in minutes.

Connectivity solutions with built-in security. We're setting a new standard for networking.

Options for every business

Three AT&T Dynamic Defense packages offer a range of features to suit a variety of business needs, from simple network structures with limited access points to the most complex global scenarios. Each package is available to AT&T Dedicated Internet (ADI) customers at a low monthly fee.
