

Send and receive data at the speed of light with AT&T shared fiber

Features

- High-bandwidth connection with speeds up to 5 GIG¹
- 99.9% network reliability with 24/7 business support²
- Optional value-added services including wireless internet backup
- Flexibility and scalability to fit business needs

Benefits

- Boost productivity with symmetrical uploads and downloads, seamless video and streaming, and high-priority transaction processing
- Safeguard your network and data with built-in AT&T network security tools
- Manage costs effectively with predictable monthly charges and no overages
- Optimize cloud connections, video monitoring, retail transactions, collaboration tools, and Wi-Fi capabilities

When speed, performance, and reliability are key, you need an internet connection that's all business.

If you want to keep pace with the latest technology and applications, you need high-speed internet that has no limits. Fiber internet is the fastest and most reliable connection available to businesses today. But it's also future-proofed to handle whatever lies down the road. Fiber's dynamic, highly resilient, low latency fiber-optic infrastructure meets the speed and bandwidth demands of technologies like multi-cloud computing and artificial intelligence. Its multi-decade lifespan also means there's plenty of room to grow as new solutions emerge. Even the ones we haven't dreamed up yet.

One connection, limitless possibilities

As your business evolves, you'll need internet that measures up to where and how you do business and the devices, platforms, and hardware you'll use. Flexibility, scalability, and responsiveness make up fiber's DNA. It's highly versatile in both office and hybrid environments—connecting employees, customers, and systems in milliseconds.

Because fiber transmits data using light instead of electricity, data travels at much higher speeds and has greater capacity than cable. Symmetrical uploads and downloads enable lightning-quick data exchanges for fast cloud access and crisp video conferencing, HD streaming, and Voice over Internet Protocol (VoIP) services. It's ideal for high-speed data processing and transactions, large downloads and file sharing, and near-instant communication with Internet of Things (IoT) devices.

¹ Limited availability. Speeds based on wired connection. Actual speeds may vary. Single device wired speed maximum, 4.7Gbps. For more info., visit att.com/speed101.

² Based on network availability.

Shared connectivity to power your future

Fiber is the foundation on which your entire business future will be built. Once installed, it'll keep you in the data super-fast lane for years. A fiber connection also opens you up to a fully converged business network. It pairs well with Wi-Fi, including services like our AT&T Internet Air for Business. It also provides the backbone to power technology game changers like 5G and edge computing.

If you're looking to reap fiber benefits but aren't ready for a dedicated line, a shared fiber internet connection is your best bet. "Shared" means you share your connection with other users—but with the speed and capacity of fiber, there's room for everyone. Whether you're connecting one or multiple business sites, AT&T has two shared fiber solutions to choose from: AT&T Business Fiber® (ABF) and AT&T High Speed Internet Access – Enterprise (HSIA-E).

AT&T Business Fiber

If you need high-speed fiber internet for a small business, single site, or temporary location, ABF has got you covered. ABF is shared fiber internet that's simple and flexible, with speeds up to 5 Gigs and no data caps, no equipment fees, and no annual contract.

A business internet connection is only as good as the tools that help keep it secure. With AT&T, we've got you covered there too. We combine our built-in patented security technology with AT&T ActiveArmorSM to help detect and prevent threats from reaching your systems and devices. You'll also benefit from 99.9% reliability plus a personalized portal to manage service with access to our 24/7 customer help desk.

AT&T High Speed Internet Access – Enterprise

For mid or large-sized companies, HSIA-E offers the same fast, reliable ABF features and benefits, but for multiple sites or branch offices—we make this possible through a national AT&T fiber footprint that's consistently expanding every day. As of mid-2024, we have more than 850,000 fiber-lit buildings with connections to roughly 4 million U.S. business customer locations.

Just like ABF, our focus is on bringing exceptional service, efficiency, and value no matter how large or successful your operations get. A single contract and unified billing invoice simplify account management. If an issue occurs, you'll get round-the-clock dedicated support through a single contact number for all sites which makes way for a faster and productive resolution.

Add-on services to support you

At AT&T, we keep your business operating even during the unexpected. Our AT&T Managed Internet Backup is a new way to ensure business continuity. It provides seamless wireless failover to our AT&T Wireless Network should an internet or power outage occur. Dynamic IP addressing via a wireless gateway helps secure sensitive data, including credit card and point of sale (POS) transactions. It's a quick, effective backup solution with no upfront costs and a minimal charge to your monthly bill.

Built for the speed of business.		
	AT&T Business Fiber	AT&T High Speed Internet – Enterprise
Location	One site, fixed or temporary	Multiple sites
Speed	Symmetrical speeds up to 5Gbps	Symmetrical speeds up to 5Gbps
Contract	No annual contract	1-3 yr contract with a single service agreement for all business locations
Billing	Single monthly bill per location	Single unified bill for all locations
Data caps	No speed or data caps	No speed or data caps
Equipment and installation fees	No equipment fees, no installation fees with online orders only	No equipment fees. Installation fees vary depending on contract terms.
Customer support	Dedicated 24/7 business support	Dedicated 24/7 business support
Value-added services	Options for bundling AT&T backup, voice, security, and cloud solutions. Integrated gateway (fiber and 5G) available with purchase of 1G+ orders*	Options for bundling AT&T backup, voice, security, and cloud solutions

* Limited avail. in select areas. Req's. Business Fiber 1 Gig or higher and WNC-CGW452 gateway. Wireless backup does not work in the event of a loss of power; Wireless coverage not available everywhere. LTE coverage may be used depending on signal availability at your address. See att.com/wirelesscoverage. Other terms apply. See below for details

Why AT&T Business?

See how ultra-fast, reliable fiber and 5G connectivity protected by built-in security give you a new level of confidence in the possibilities of your network. Let our experts work with you to solve your challenges and accelerate outcomes. Your business deserves the AT&T Business difference—a new standard for networking.

Contact your AT&T Business representative to learn more about AT&T shared fiber internet.

Integrated Internet Back-up: Wireless Data Restrictions: After 250GB, AT&T may temporarily slow data speeds if the network is busy and data speeds are up to a max of 3 Mbps. Video streaming limited to SD. Speed, coverage, and performance not guaranteed. Feature subject to AT&T network agreement practices (att.com/broadbandinfo). Wireless backup does not work in the event of power loss. Battery backup options may be available at an additional cost. Add'l terms and restrictions apply. For details, see the AT&T Customer Service Agreement (att.com/CSA) and additional Integrated Backup incorporated therein.
