

Smarter & Safer™

Modernize to NG9-1-1 with a Smarter Partner. RapidDeploy Nimbus CAD

5 Core Advantages of RapidDeploy Nimbus CAD

- 1 Affordable SaaS subscription pricing structure
- 2 DoD-level security and reliability
- 3 Future-ready AI features & unlimited interfaces
- 4 Full-function mobile app and web application
- 5 Cloud-hosted system that can be deployed in days, not years

Revolutionary benefits.

- Help reduce budget challenges and escalating costs with affordable, subscription-based pricing
- Instant, in-depth reporting and analytics identifies inefficiencies through detailed analysis
- Supports in-vehicle computers with MDC solution. Mobile app supports Apple, Android phones and tablets, and Samsung DeX
- Backed with professional sales support and project management from AT&T throughout design, installation and migration periods

Do what no CAD has done before.

More than 80 percent of 9-1-1 calls come from mobile phones. RapidDeploy Nimbus CAD integrates RapidSOS, RapidLocate and ALI to deliver faster, more accurate caller location to call-takers, dispatchers and responders. Combined with native Esri GIS features and unlimited map layers, that precision accelerates response times, drives situational awareness and enhances public safety outcomes right now.

Know where. Know who. Know now.

Now, every question has a smarter answer.

When you know now, you can help now. Built on a platform that integrates leading real-time solutions from every sphere—location, mapping, officer locations, incident details, weather, traffic, CCTV and more—RapidDeploy helps deliver greater situational awareness for improved public safety outcomes. With next-generation interoperability and data integration, you can connect and protect like never before.

Top level security.

RapidDeploy Nimbus CAD runs on the Microsoft Azure Government Cloud—the same cloud platform used by the FBI, CIA and other federal, state and local agencies.

Built to meet strict Level 5 DoD and CJIS compliance requirements, Azure features a built-in, multi-layered security approach to help prevent cyber-attacks and other crippling threats. Plus, RapidDeploy's world-class security also meets critical compliance standards that exceed all US government regulatory requirements*.

Cloud-based CAD is the NG9-1-1 game-changer.

Available through AT&T Next Generation 9-1-1, RapidDeploy Nimbus Cloud Aided Dispatch™ is a revolutionary national, cloud-based CAD solution for Public Safety agencies. It's not only affordable, highly secure and future-ready, the solution is also frequently upgraded and improved. RapidDeploy continues to refine its innovative CAD at frequent intervals. Better still, there are no additional fees as well as no disruption or downtime with your service.

The future of Next Generation 9-1-1 CAD is here today.

Let AT&T—the industry leader in Public Safety emergency communications—help you implement the RapidDeploy Nimbus CAD solution. Smarter technology can help your PSAP improve caller location, enhance security as well as accelerate incident details, response times and public safety outcomes.
