

Smarter & Safer™

VESTA® Map Local by Motorola Solutions

Transform your PSAP with call handling location solutions from AT&T.

VESTA® Map Local from Motorola Solutions is one of the first mapping systems to integrate both RapidSOS location technology and the Esri® ArcGIS online maps. Its capabilities help your PSAP improve location accuracy for wireless calls, including those indoors, and offer unprecedented user performance and map display speed.

Greater innovation for every location.

VESTA Map Local is one of the first to take advantage of the innovative Esri® ArcGIS Runtime Software Development Kit (SDK). The result is an ability to “see” outside county lines, where no map or GIS data previously existed. Whether a wireless call originates inside or outside of a county, 9-1-1 calltakers will have contextual data—including streets or points of interest—to help them locate callers.

Helps pinpoint the call with greater speed & accuracy.

Thanks to full Integration with Motorola Solutions' VESTA® 9-1-1 call handling system, the VESTA Map Local solution saves PSAPs valuable seconds when they matter most.

Many 9-1-1 calls made with a wireless device do not offer quick access to a precise caller location. By integrating the RapidSOS NG911 Clearinghouse, PSAPs can help pinpoint locations faster with greater accuracy.

Superior user experience.

The most important detail is knowing where to find people in need. VESTA Map Local rises to the challenge, helping supply pinpoint locations easier than ever.

- Provides a detailed, yet easy-to-use interface for managing incidents
- Expands views past jurisdictional lines to more easily locate wireless callers on ArcGIS Online maps
- Displays wireline, Phase I & II, VoIP, SMS and Telematics calls with distinct icons for a complete view
- Streamlines processes by showing 9-1-1 call type and ALI as layers vs. disparate system views

Greater operational efficiencies.

- Saves valuable time with interactive tools, measuring area and distance with address and search tools
- Speeds response by bringing GIS data to the forefront of decision making
- Requires minimal clicks, reducing response time
- Helps first responders better serve wireless callers, following their movement and showing a confidence zone of their locations

Flexible & reliable.

- Utilizes new and powerful Esri® technology, enabling a future-ready solution and a smart investment
- Enhances collaboration within a PSAP or with other local PSAPs via shared bookmarks
- Integrates seamlessly with the VESTA® 9-1-1 call handling system for an inclusive NG9-1-1 call handling solution

Transform your PSAP with Next Generation 9-1-1 Call Handling solutions from AT&T.

Let AT&T — the industry leader in Public Safety emergency communications — help you implement Motorola Solutions' VESTA Map Local.

Smarter technology customized to your PSAP can help simplify your transition to NG9-1-1, improve caller location accuracy, clarify incident details as well as improve response times and public safety outcomes.
