

Strategic, integrated solutions backed by expertise

Dedicated to digital transformation for your industry

Integrated solutions from AT&T provide flexible options for your digital transformation that are designed to fit the unique needs of your business.

As your business evolves and your business needs change, the integrated solutions team is here for you. With experience across all industries, we understand your business demands and deliver the right insights, guidance, and solutions for you—helping you tackle today's challenges and seize tomorrow's opportunities.

We are a global force of solutions specialists and industry experts relentlessly focused on your business needs. We use our unmatched experience to help you manage complexity and fuel your digital transformation through thoughtful guidance, integrated solutions, and impeccable execution at the speed of your business.

Our team are experts at solving business challenges and helping you navigate complexity. We're dedicated to finding the solutions that are best for your business to reach your goals. Our focus is on how communications, connectivity, and technology can deliver business outcomes. With experts based in the countries and regions important for your business, we can deliver a smooth and efficient digital transformation. AT&T Business is here for you – a single company capable of managing multiple vendors, solutions, and architectures simultaneously. We manage the complexity every step of the way.

Key benefits:

- **Customer focused** – We're always listening to what you need
- **Expertise** – Team of highly skilled, technically sound subject matter experts
- **Integration** – End-to-end vision for your solution to meet your business needs while leveraging existing infrastructure to protect your investments
- **Simplifying complexity** – Advise, architect, design, integrate, deploy, govern, optimize, and manage every aspect of your solution
- **Accountability** – Unified approach with one vendor under a single contract
- **Speed and execution** – Delivering the expected solution on-time and on-budget
- **Risk reduction** – In every phase of your digital transformation through our knowledge, experience, and capabilities.
- **Global availability** – With teams based in EMEA, APAC, LATAM, and North America that understand the nuances of rules, regulations, and cultures in each location

Strategic solutions offered from integrated solutions include:

- **Network, edge, and cloud solutions** – Organizations must continue to evolve their network infrastructure to meet the growing demands of application and real-time collaboration services. With the acceleration of remote and at-home work, coupled with cloud transformation, we modernize the core and edge network infrastructure to deliver the most efficient and cost-effective global application services needed by your employees and partners.

Our expertise spans all of the leading software-defined networking (SD-WAN) platforms, and as advisors to you, we can help you find the right balance of hybrid and multi-cloud connectivity solutions. In partnership with our cybersecurity organization, we also help ensure the evolution of your network and cloud architecture to deliver “as-a-service” capabilities that are highly secure and adaptive to user roles and personas.

- **IoT, 5G, and mobile edge solutions** – Our Internet of Things (IoT), 5G, and mobile edge solutions help your business drive operational efficiency and adapt to an increasingly mobilized world – improving market position and driving increased revenue streams. Based on your needs, we collaborate with your company to define and build solutions centered on frameworks that connect business strategies to outcomes while driving innovation forward. We identify catalysts for business transformation, customer engagement, and other opportunities for change. Our solutions framework helps you maintain focus on the important business metrics that transform IoT and cellular from just connectivity or cost of goods to a return on investment, including:
 - Lifecycle management to streamline and optimize the mobility ecosystem from procurement to logistics and end-user support.
 - A service subscription or pay-as-you-go model that optimizes investments in mobile technology and streamlines technology upgrades.

By engaging with us, you can reduce the risks associated with cutting-edge projects while also benefiting from our strategic and experienced perspective to move at the speed of your business.

- **Voice, collaboration, and contact center solutions** – We offer a comprehensive portfolio of voice and collaboration expertise and contact center platforms which enable a holistic program for you. We call this our voice and collaboration “ecosystem” approach. This is exercised in a phased manner so you realize incremental benefits and ensure a consistent, secure, cost effective, and highly performing infrastructure.

Starting with SIP transformation, we help you complete your TDM-to-IP-based voice migration, including readiness of the network and adoption of hosted and cloud-based services. AT&T Business can help address state and federal compliance needs for emergency dialing (“E911”). Our expertise in collaboration solutions helps you realize the “future of work” by maximizing employee experiences and productivity for work at home and making the most of cloud services. We take a holistic approach, including end-to-end considerations for mobile endpoints and workflow integrations. Finally, we have the expertise to help you plan and transform your contact center to deliver greater automation and omni-channel engagement for improved customer experience.

- **Cybersecurity** – Integrated solutions specializes in offering vendor platforms or service-based solutions in a variety of key focus areas, including:
 - Managed security solutions – Proactive management and monitoring security solutions for all network devices (firewall, LAN switches, wide-area network (WAN) routers, DNS, DHCP servers, and other devices) and applications security. Security information and event management (SIEM) tools are also utilized for monitoring for NOC/SOC management.
 - Endpoint management – For end-user devices including 24x7 intrusion detection and prevention systems.
 - Threat management solutions – 24x7 vigilance to prevent cyberattacks, detect cyber threats, and respond to security incidents and its remediation. These solutions include IoT devices, end user, and network devices.
 - Two-factor authentication solutions – Secure access for remote workers to applications in the private or public cloud environments for identity and access management (IAM).
 - Cloud-based security services – Cloud security solutions for different categories of cloud computing such as Software-as-a-Service (SaaS) or Infrastructure-as-a-Service (IaaS). The services also include data loss prevention (DLP), Cloud Access Security Broker (CASB), URL filtering, and others.
 - Voice Call Authentication Services (CAS) – A cloud-based CAS using APIs with other data sources to gain additional insight and information regarding the calling number. It is offered for Customer Contact Center Voice Call Authentication.

Industry focused

We have subject matter experts dedicated to solving business challenges with technology solutions within your industry:

Healthcare

Financial services

Sports and entertainment

Manufacturing

Public sector

Professional services
