

What's new with AT&T Enhanced Push-to-Talk

OUR NEW BUSINESS AND MISSION CRITICAL FEATURES ARE BASED ON 3GPP MCPTT STANDARDS AND INCLUDE SITUATIONAL AWARENESS AND EMERGENCY CALLING AS WELL AS A REVAMPED LAND MOBILE RADIO (LMR) USER INTERFACE.

3GPP MCPTT based features for mission and business critical operations

- **Emergency calling and alerts:** Prioritize emergency calling and alert traffic over all other traffic.
- **User check:** View the status of a user's device location, battery level, signal strength, etc.
- **User disable/enable:** Remotely disable/enable a specific device's ability to access AT&T Enhanced Push-to-Talk.

Increase your workforce productivity

- **Additional talk groups:** Introducing 'zones' and the ability to create up to 96 talkgroups on the LMR User Interface.
- **Quick group calling:** Location supervisors can create a quick group based on visible users on the map.
- **Custom scan list:** Administrators can create custom scan lists and set a priority per user on the LMR UI.
- **Highly secure messaging and location capabilities:** Share location, text, images and more in the LMR UI.
- **Tone control:** Ability to turn on/off individual or all tones used by the app.
- **Quick text:** Quickly respond to a message thread using up to 20 saved text messages.

Corporate Admin Tool (CAT) enhancements:

- **External contact import:** Import up to 1000 contacts using xls or csv file formats.
- **Publish location:** Turn on/off location sharing per user. The default setting is 'on' to allow supervisors or dispatchers to see user locations.
- **User set increase:** User set size is increased from 200 to 250. User sets are a logical set of users who are assigned as a contact with others. User sets are a fast way to program multiple devices easily.

New feature packages

AT&T Enhanced Push-to-Talk is now available in Standard and Advanced.

Our Standard Offer is designed for all Enterprise and FirstNet customers while our Advanced tier is designed for Business Corporate Responsibility Users (CRU) as well as mission critical support and operations customers.

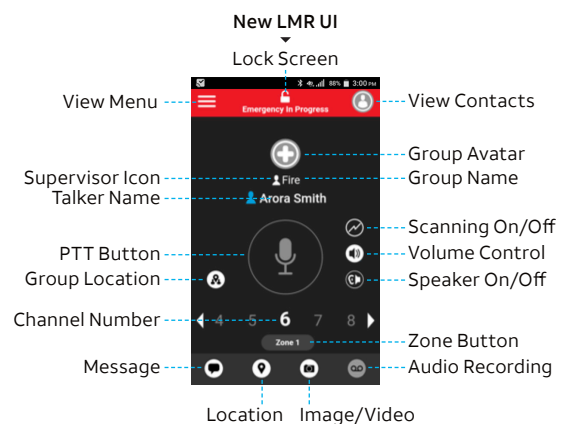

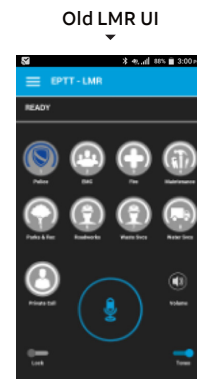

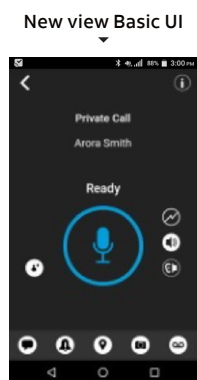

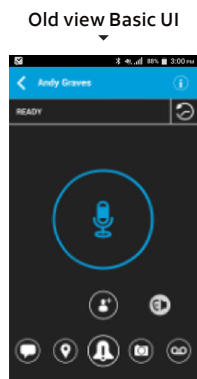

And with only one app to download, your features will mirror your provisioning.

Standard	Advanced Includes Standard features plus
Basic & LMR User Interfaces (UI)	Emergency Services
Instant 1:1 & group communication	User Check
Presence indicator	User Disable and Enable
Highly secure messaging and mapping capabilities	Priority Network services*
Up to 96 channels via the LMR UI	LMR interoperability**

*Advanced includes the monthly recurring charges for Land Mobile Radio Interoperability. The non-recurring charges for LMR Interoperability are billed separately.

** FirstNet customers: Compatible with First Priority, which provides priority and preemption for Primary Users on the FirstNet core. Available for an additional fee for Extended Primary Users. Enterprise customers: Includes ADTM priority services.

What's new with our basic and Land Mobile Radio (LMR) User Interfaces (UI)?

What's new with the mobile application?

- **Minimum Android Operating System requirement:** Android 5.0+
- **No minimum requirement for iOS.**
