

# Simplify your network with AT&T Managed Switched Ethernet on Demand (Managed ASEoD)

## What is Managed ASEoD?

A robust and easily implemented network that combines:

### ASEoD

- Connects **two or more business locations**
- Provides secure virtual private network and Internet access on a **single connection**
- Uses our business center portal, allowing customers **to rapidly scale and provision networks with direct self-service access**
  - Quickly improve traffic flow, reduce congestion as your business changes
  - Real time access to your network for faster service deployment
  - Frees up IT resources to focus on core business

### Managed device

- Uses a single device to provide
  - Routing
  - Firewall
  - Intrusion prevention system (IPS)
  - Switching
  - Web filtering
- Provides proactive management around the clock to detect, prevent and resolve issues
- Includes dedicated project management for service activation

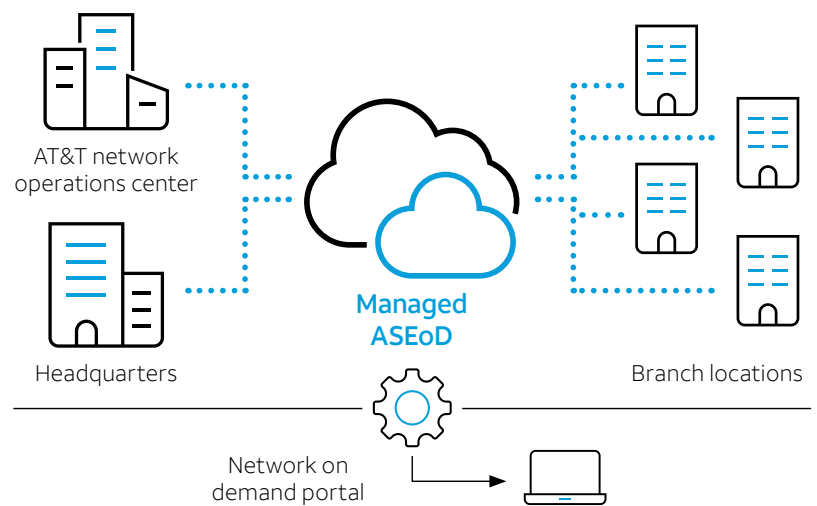

## Why Managed ASEoD?

Changing technology has forced companies to accelerate their communications strategy, creating increased complexity.

**Managed ASEoD** is the single solution that minimizes:

- Multiple providers, circuits and devices
- Competing demands requiring IT Expertise
- Technology churn

Handle more data, more bandwidth, more end-points, and bigger workloads
