Know where your Assets in Cases are in near real-time

Trade Show Cases | Medical Equipment | Important Documents | Disaster Relief Equipment | Data Center Equipment | Construction Equipment

AT&T IoT Asset Management for Assets in Cases

Problem
You don’t have to be in a band to have cases of things to track. You might be transporting important documents or tracking workplace equipment or tradeshow equipment in cases. No matter what you are tracking in cases, you can gain insight into the location, movement and condition of your things. Set thresholds for humidity, temperature, impact, and ambient light intensity. Establish geofencing to determine if your assets in cases are outside or inside of established boundaries.

Solution
AT&T Asset Management – Operations Center provides the ability to track location and movement of your important cases. A light sensor can also allow let you know when a case has been opened.

Establish geofencing to determine if your cases are outside or inside of established boundaries.

Simply attach an asset tracker to your case to manage and monitor your connected assets via AT&T’s Asset Management - Operations Center.

AT&T Asset Management - Operations Center (AMOC)

AMOC is a customizable solution that enables businesses to monitor a wide range of IoT assets in multiple locations in one centralized dashboard. Using AMOC, businesses can set up alerts and quickly identify and solve issues, helping to improve operational efficiency and peak productivity of assets.

AMOC Capabilities

• Compatible with multiple LTE/LTE-M/satellite/Wi-Fi devices
• View historical trends of sensor data
• Respond in near real-time to critical issues
• Devices are available to support the location of the vehicle
• Use geofencing to quickly determine if assets are where they should be located

For more information, including a complete list of available devices, contact an AT&T Representative or visit www.att.com/IoT
