

Adopting a remote work culture quickly

Employees may plan to work from home to avoid bad weather conditions or even threats of illnesses or epidemics. These situations often arise unexpectedly and can vary in duration. It's critical that mitigation plans be activated quickly and are scalable in case individuals find the need to work remotely.

The challenge of remote work isn't just about physical location, it is also about the need for people to feel connected and stay informed.

Remote workers need access to corporate networks, collaboration tools such as web and video conferencing, file-sharing, consistent mobile connectivity, and insurance against security breaches.

Considerations

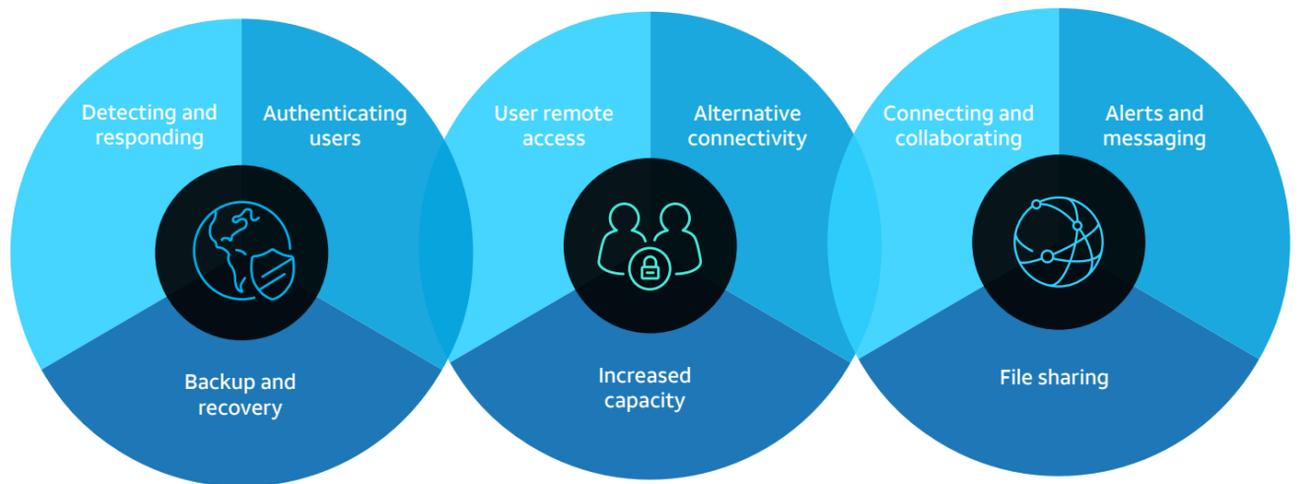

Help secure, protect, and manage data from virtually anywhere

Stay connected with highly secure access to critical business apps and scale bandwidth as needed for remote employees

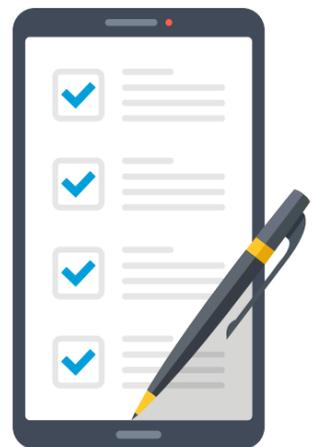

Communicate and collaborate effectively across your organization

Best practices

- Assess data and technology needs in advance in the event people need to work remotely
- Have a remote access policy in place and continue to assess and update periodically
- Communicate your plan to employees and vendor partners
- Work with a company with an array of solutions and extensive experience in preparing organizations for working remotely
