AT&T 5G

How AT&T nationwide 5G brings a new level of small-business mobility

5G is the first mobile network truly built in the cloud and built for business. That means lower latency and new features and upgrades. So 5G has the potential to significantly impact how small businesses are able to operate.

How will 5G affect the day-to-day for small business? That depends. Some may be able to immediately reap the benefits of a lower-latency environment while others may not see the benefits of 5G for quite some time. In order to know the way no one should make assumptions about the pace of these tremendous changes in environment, what 5G brings to businesses is difficult to quantify right now.

5G technology offers new possibilities that businesses in these coverage areas can start to explore what 5G can do for their business. In a few ways, it will drive new possibilities to bring your business to the next level.

Robust reliability

Our advanced networks with ultra-fast speeds and low latency ensure your remote employees are using data apps seamlessly, even in challenging locations.

What could that mean for you?

It means you’ll get it right the first time, and you won’t have to worry about missed deadlines or missed connections.

Ultra-fast speeds

Seamlessly connect to your customers, employees, and suppliers to always stay connected. With 5G you can get your work done, even when you’re not in the office.

What could that mean for you?

It means you can stay productive and connected, even if you’re not in the office.

Better capacity and coverage

More connected devices in a smaller area, along with increased data speeds and lower latencies, means your business can stay connected and keep working as you go.

What could that mean for you?

You can stay productive and connected, even if you’re not in the office.

Ultra-fast speeds

As it is expected to deliver up to 50 more speed than 4G, the 5G network will give you the capability to effectively manage complex and demanding business tasks in real-time and in less time.

What could that mean for you?

It means businesses operating remote teams can work more efficiently, and the reduced latency and increased throughput will ensure a more productive and flexible workspace.

More security

With 5G, AT&T offers a multi-layered approach to security, including advanced encryption, to help keep your business data secure. So you can focus on growing your business without worrying about security threats.

What could that mean for you?

AT&T’s 5G network will keep your data secure, helping you protect your business against cyber threats and keeping your data safe and secure.

Eventually to deliver up to 50x more speed.

50x more speed compared to 4G, with ultra-fast speeds and low latency, AT&T 5G offers the reliability and capacity you need to stay connected and productive, even as your business grows.

New experiences

Advancing the network, AT&T is committed to delivering powerful new technologies that will shape the future of consumer, industrial, and enterprise solutions. From enhanced user experiences to new business opportunities, 5G is transforming how we work, live, and play.

What could that mean for you?

It means better support for your teams, more efficient supply chains, and increased productivity. 5G can enable your business to reach new levels of innovation and growth.
