How a Virtual Private Network (VPN) protects you from criminals

Cyberattacks are a growing threat for small businesses and the U.S. economy, according to the U.S. Small Business Administration. The cost of cybercrimes reached $3.5 billion in 2019 alone.

Cybercriminals don’t have to win. AT&T VPN enables secure network connections without needing additional software, encryption, or tunneling. MPLS Virtual Private Networks (VPNs) can help protect your network from bad actors.

What you’ll get:

- The ability to integrate voice, video, data, and cloud
- Up to six classes of service (CoS) so you can prioritize applications
- Optional internet Virtual Local Area Network (VLAN) on shared Ethernet access
- Support for multiple VPNs so you can create a unique VPN for each of your departments
- Access to Business Center, our award-winning customer portal, so you can monitor your network with real-time network performance metrics
- Upgrade or make network changes in minutes not hours or days

AT&T VPN can help protect you from:

- Distributed Denial of Service (DDoS) attacks
- Spoofing
- Unauthorized intrusion
- Downtime and lost revenue due to a cyberattack

Get the connection that helps shield your sensitive traffic from hackers and cybercriminals.

Multiprotocol Label Switching (MPLS) VPN. Rather than running across the internet, it runs across the AT&T Global Network, the private infrastructure that allows AT&T to provide services in more than 195 countries.

According to the FBI's Internet Crime Report, while it's true that cybercriminals lurk in the shadows, waiting for a chance to break into your network to steal sensitive data or intellectual property — or just to wreak havoc — cybercriminals don't have to win.

AT&T Business is here to help small businesses in a big way. Our Tech Demystified series can help you decide what products and services will work best for your business. To learn more, visit AT&T VPN or contact your local sales representative.
