Improve operational efficiency and security for your hybrid workplace

Managed services by AT&T provide the collaboration tools, connectivity, networking, and security solutions to work from anywhere.

Businesses need to support a connected, hybrid workforce where employees can vary between remote and on-site workdays. The right internet and networking solutions, and cloud-based collaboration tools can help transform the user experience and drive innovation.

GlobalData surveys found that **60%** of employers in the professional services sector expect a hybrid future.

Top challenges:

- Different needs for different employee roles
- The need for high-speed internet connectivity and high-performance networking
- Migration to cloud-based services
- Secure endpoints across all access points
- Supporting remote collaboration
- Cost of using multiple solutions
- Keeping up with continually changing remote collaboration technology

More on security challenges:

In 2020, the shift to the work-from-home business model was swift and, in many cases, not carefully executed in terms of security. In 2021:
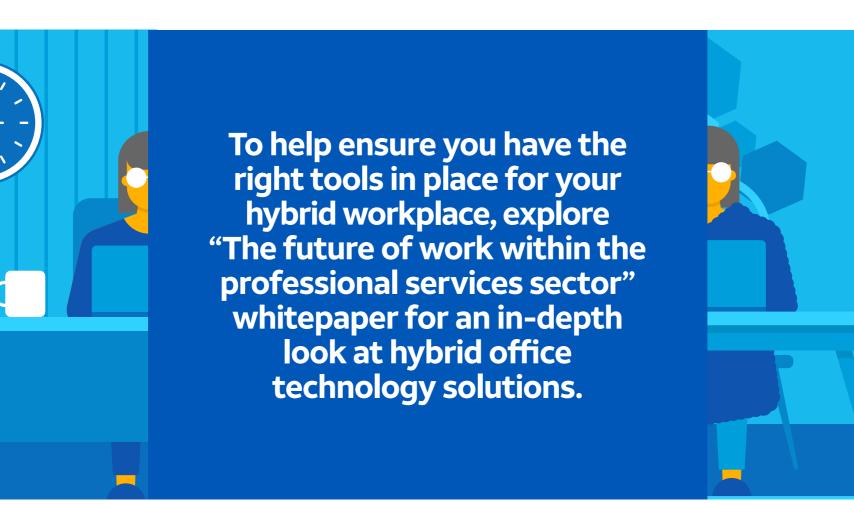

102% RISE in ransomware incidents in the beginning of the year, compared to the previous year[1]

304.7 MILLION global ransomware attacks[2]

29% SURGE in cyberattacks in the first half of the year, compared to the same period the previous year[3]

To help ensure you have the right tools in place for your hybrid workplace, explore "The future of work within the professional services sector" whitepaper for an in-depth look at hybrid office technology solutions.
