

Better secure your network with Enterprise Traffic Protector

Gain more security over internet access in your business.

Enterprise Traffic Protector **proactively identifies and blocks** ransomware, malware, (DNS) data exfiltration, and phishing **while giving you control** to better manage access to your network.

Cyberattacks can stop your network from functioning. This downtime not only costs your **business productivity**, but it **can jeopardize your customer relationships**.

To reduce cyber risks, a proactive cybersecurity solution can help protect your business no matter where your employees and guests connect to your network

\$304M

ransomware attacks occurred in 2020

Annual number of ransomware attacks worldwide from 2014 to 2020

20%

of ransomware victims are small to mid-sized businesses

Safeguard your network with **Enterprise Traffic Protector**. This easy-to-deploy solution helps you to **connect users and devices** to your network **more securely**.

With Enterprise Traffic Protector you can:

1 Block malicious attacks in near real time

2

Get your security **up and running quickly** with an easy-to-deploy cloud solution

3

Quickly administer security policies and updates via **a dashboard**

4

Gain **on and off network security** to better protect your devices and traffic

5

Stay **up-to-date** with frequent automatic security rule updates and low false positives

6

Better **manage internet access permissions** for employees and guest

7

Choose from **custom policies, security for on site and off site employees (pc, mac, handheld wireless)** to fit the needs of your business

Use case 1

Retail

Solution

Enterprise Traffic Protector provides an easy-to-deploy, highly secure solution that helps protect the retailer's network as it is accessed by guest and employee devices.

Problem

A retailer needed to protect its network from ransomware and phishing, in-store and at remote locations, as employees and guests accessed the network and internet.

Outcome

Exceptional security offers the retailer peace of mind and helps protect the business.

Use case 2

Manufacturing

Problem

A manufacturing company needed to limit website permissions on its network by job role, including 3rd-party contractors from their fleet.

Solution

Enterprise Traffic Protector enables the company to designate which websites employees can access based on their job role and restricts access for contractors to business-only sites.

Outcome

The business is able to close potential security gaps while providing appropriate internet access.

We're here for you

Are you a business wanting to better support your workforce, customers, and locations? Contact us today. We have professionals who can demystify the technology for you and get you up and running with emerging technology and other solutions for your business.
