A holistic approach to threat detection and response

As businesses digitally transform, security and operational complexities increase. Overburdened security teams are inundated with alerts and notifications from the multiple tools they manage and often must take a purely reactive approach to security.

Learn more about how AT&T Managed Extended Detection and Response can help you protect your business around the clock.

Along with flexibility and scalability, the adoption of cloud computing brings increased risk.

69% of organizations are most concerned about securing network access for remote workers.

The remote work trend brings increased security challenges.

Cybercriminals are not slowing down and organizations of every size are being targeted.

The overall number of data compromises increased more than 68% compared to 2021.

Companies are rapidly transforming the way they do business.

Global spending on digital transformation is expected to approach $6.8 trillion by 2023.

More employees are working remotely than ever before. 

25% of all professional jobs in North America will be remote by the end of 2022.
