# What is the anatomy of a ransomware attack?

## Understand this growing threat so you can disrupt the ransomware attack and protect your business

**Ransomware attacks are skyrocketing.** Remote workers may access the company network through a less secure method, such as public or home networks. As a result, businesses with a hybrid workforce might be particularly vulnerable to these attacks.

More than

**1/3**

of organizations worldwide have experienced a ransomware attack or breach[1]
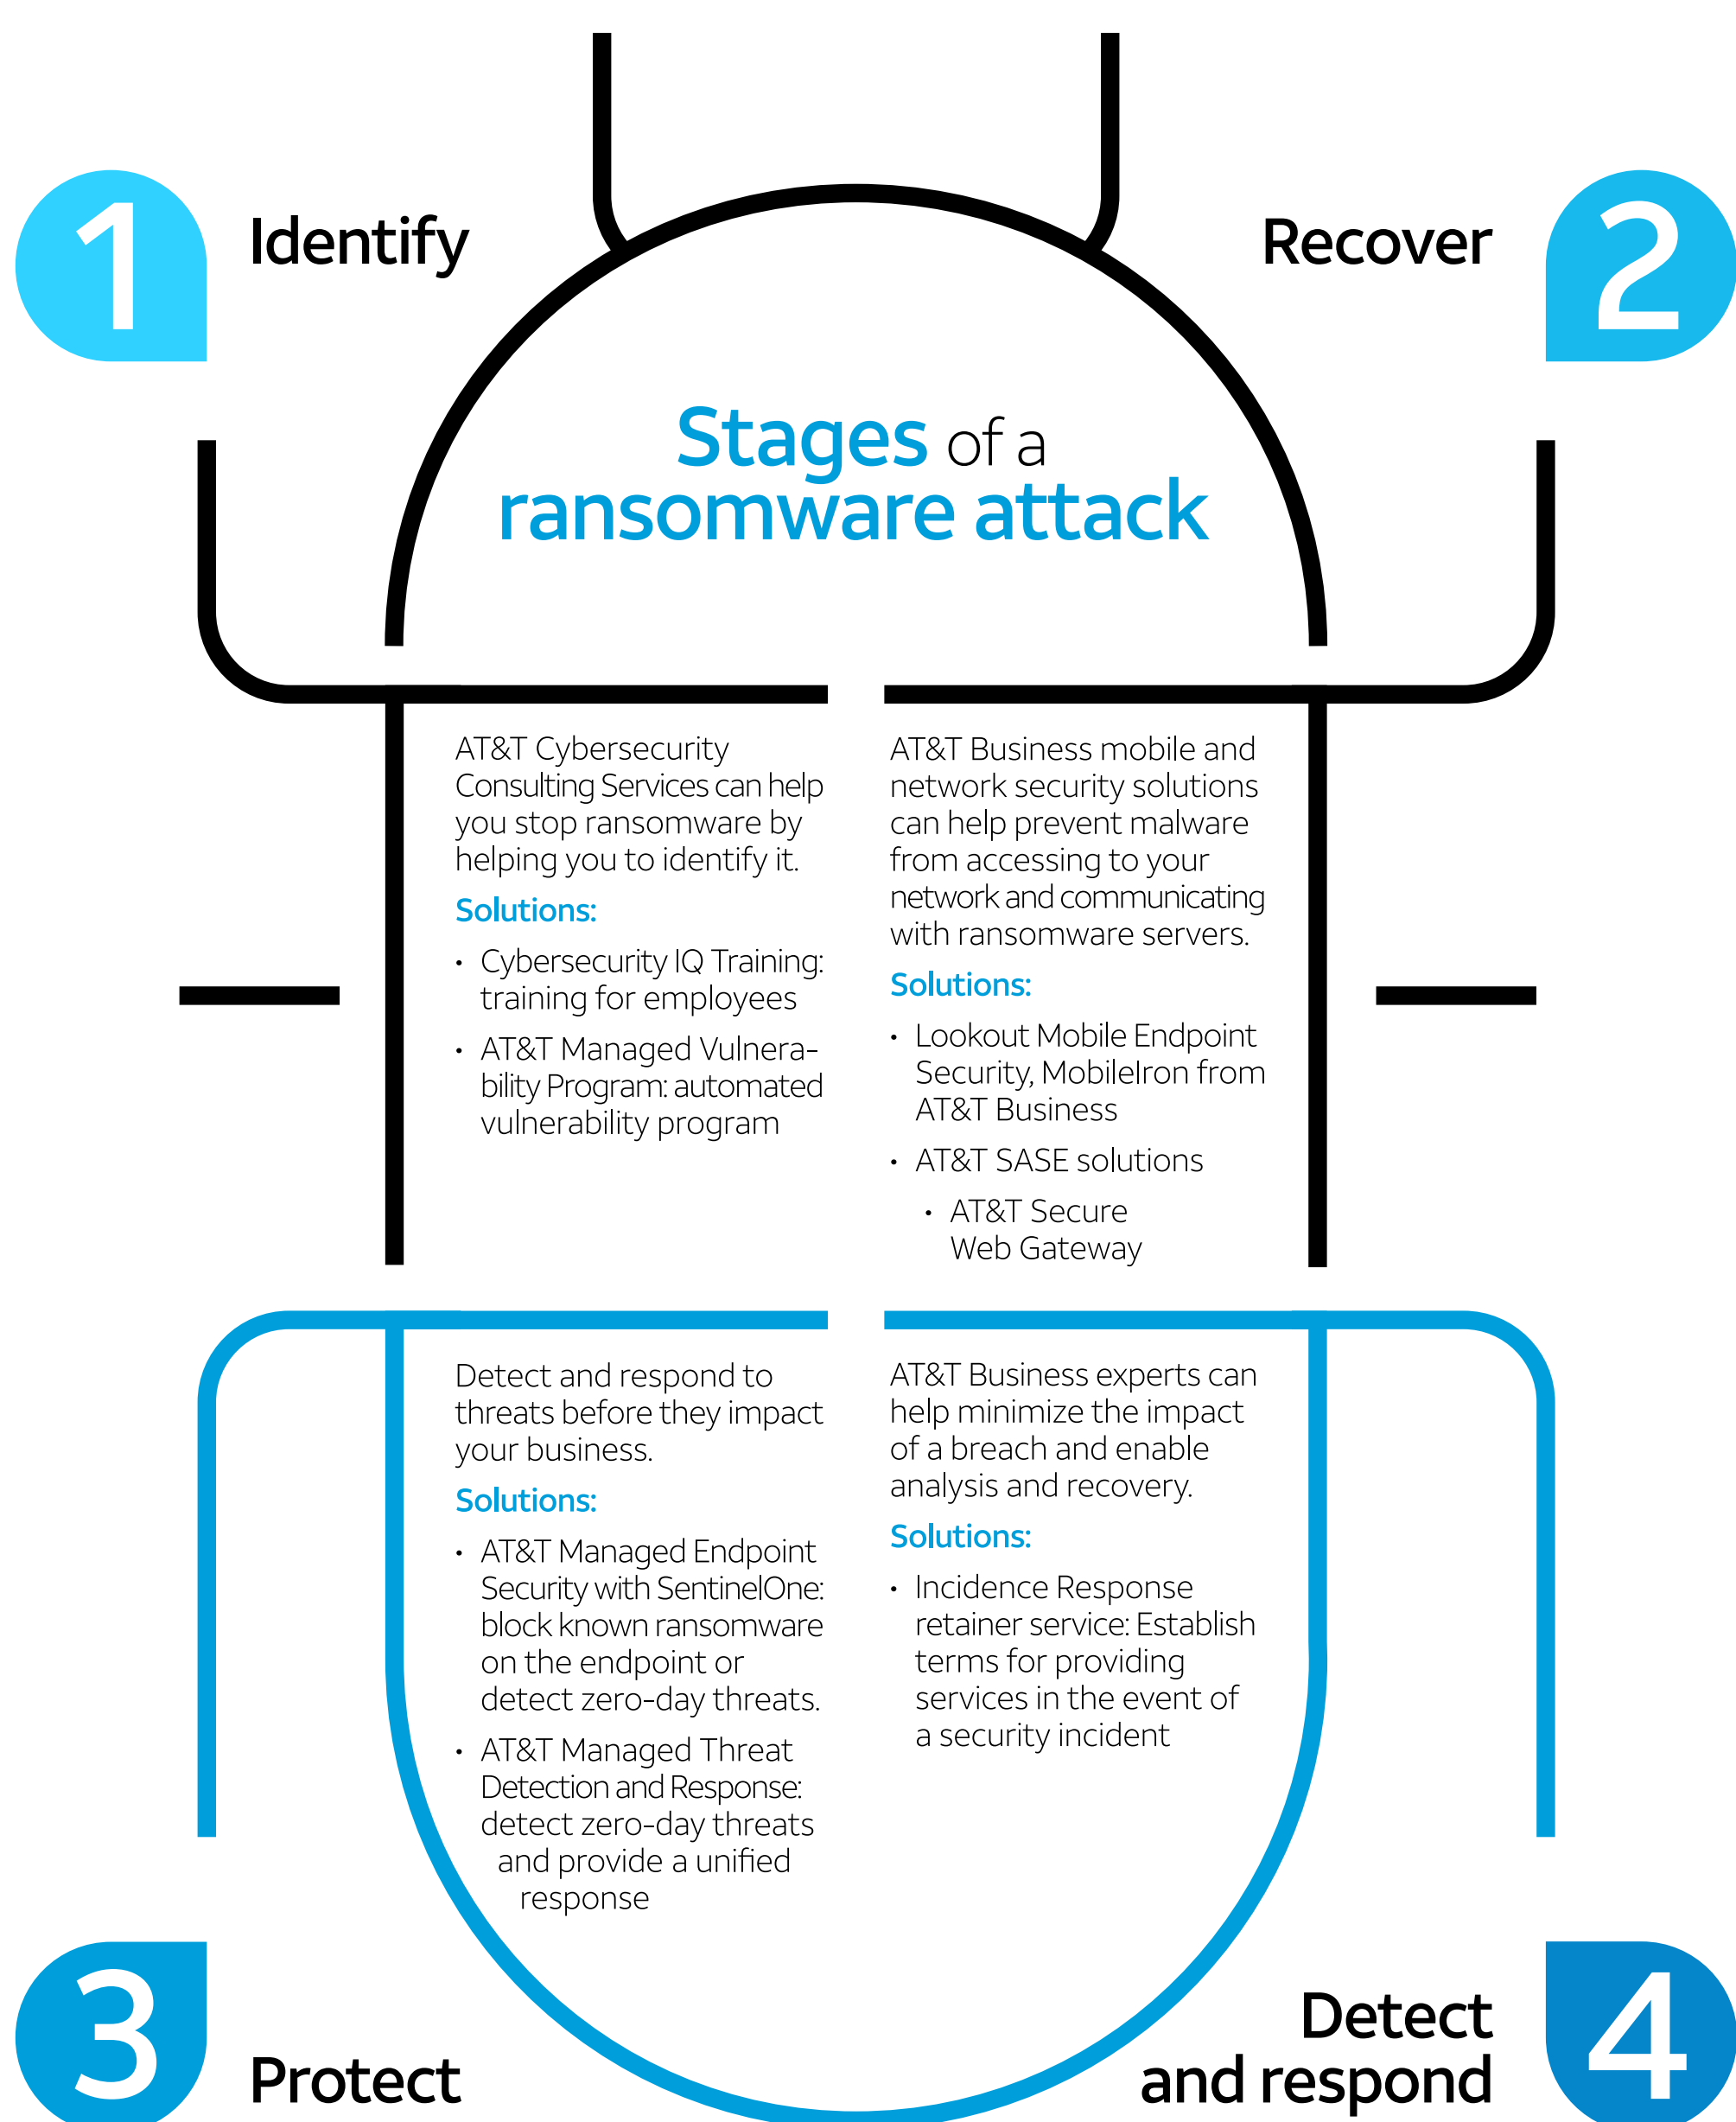

While the average ransom payment was almost a

**1/4 million dollars,**

a few large ransom payments (more than $1 million) skewed the average[1]
