Across the United States, public safety agencies are transforming how they handle and respond to 9-1-1 emergency calls. With people embracing mobile technology in ever-increasing numbers, the move to modernization will help public safety agencies shorten response times and increase positive outcomes. Let’s look at the numbers.

1. **240 million calls are placed to 9-1-1 every year.**

2. **97% of 9-1-1 calls will originate from mobile devices by 2022.**

3. **50.8% of US homes are cell phone-only.**

4. **ONLY 20% of PSAPS can accept Text-to-9-1-1.**

5. **5,783 primary and secondary US public safety answering points (PSAPS).**

6. **10,000 lives saved every year.**

7. **When seconds count, experience counts the most.**

AT&T has emerged as a leader in the transition of legacy 9-1-1 or traditional 9-1-1 to Next Generation 9-1-1. AT&T’s passion and commitment to protecting communities is even stronger today. Every day, on every call, AT&T is closing the public safety gap.
