

AT&T Dynamic Defense[®]

Stop threats before they reach your business

AT&T Dynamic Defense is available with AT&T Dedicated Internet and AT&T Switched Ethernet on Demand with Internet Offload.

Features and benefits

- AT&T threat intelligence helps stop threats before they reach your network
- 24/7 monitoring helps maintain consistent protection and performance
- ~30-minute deployment accelerates time to security
- Recommended or custom policies deliver flexible, business-grade protection
- Integrated billing simplifies management and reduces overhead
- No-contract flexibility provides a cost-effective alternative to add-on solutions

Stay ahead of an expanding attack surface

As you adopt as-a-service models, grow your business, and extend your network to the cloud, your network's attack surface grows. Add-on solutions can be effective, but they add complexity and strain your resources. AT&T Dynamic Defense helps you stay ahead of ever-evolving threats with the right policies and protections in place.

Built-in protection

AT&T Dynamic Defense is embedded in our global network infrastructure. It detects threats, filters malicious traffic, and applies security controls before data reaches your local network—extending AT&T network-based protection to your environment.

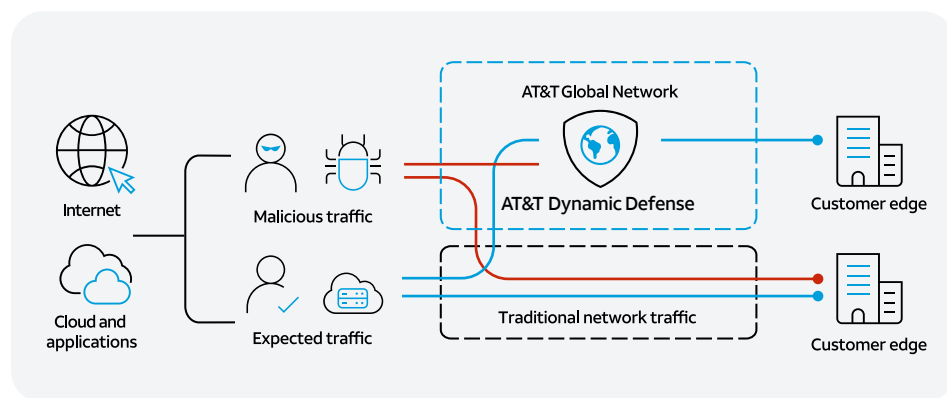

Simplified security

AT&T Dynamic Defense combines multiple security features into a single capability that's embedded within your connectivity. It works as a stand-alone security solution or as an added layer of defense, compatible with your current security solutions. There's no separate equipment to buy and no hardware needed. You can say goodbye to add-on security solutions from multiple providers and the extra expense, contracts, and maintenance that follow.

Unrivalled threat protection

The AT&T global network carries more than 1 exabyte of data traffic on an average day, giving us visibility and insights into new threats as they arise and the ability to immediately block malicious traffic from reaching your network.

Our threat intelligence is powered by machine learning (ML) and artificial intelligence (AI), so it adapts to the evolving risk landscape. Now, Dynamic Defense extends our best-in-class threat protection to the edge of your network.

Security for a modern network

AT&T Dynamic Defense offers a range of features to help protect your users, data, and applications on-premises, remotely, or in the cloud:

- **AT&T Dynamic Defense shield**, powered by AT&T threat intelligence, detects and automatically blocks known malicious traffic to and from your network. It mitigates risks and malicious attacks.
- **Configurable, stateful firewall, geo filtering, and web filtering** enable you to apply policies in your network. Use AT&T Chief Security Office recommended policies or your own custom policies. Either way, managing policies is centralized and simple.
- **Application-based policy** provides granular security controls based on known business applications.
- **AI assistant** acts as your personal assistant for security insights, log analysis, troubleshooting, and more.
- **AI defense** monitors and controls AI usage across your network, blocking AI applications with granular controls to reduce risk and improve visibility.
- **Reporting and logging** capabilities aid in security analysis and can provide valuable insight into the threats your business faces. Displays mitigated risks, intrusion attempts, and blocked IP addresses in a user-friendly format.
- **Version control** keeps track of multiple versions of security policy configurations that can be restored quickly if a disruption occurs.

AT&T Dynamic Defense seamlessly integrates with these connectivity options:

- **AT&T Dedicated Internet** – Private, unshared internet access with symmetrical upload/download speeds, proactive network monitoring and maintenance, and industry-leading performance and SLAs—both throughout the U.S. and globally.
- **AT&T Switched Ethernet Service on DemandSM with Internet Offload** – Adaptable, on-demand, and secure private service that connects two or more business locations using our reliable, high-speed fiber network.

Options for every business

Three AT&T Dynamic Defense packages offer a range of features to suit a variety of business needs, from simple network structures with limited access points to the most complex global scenarios.

		Standard \$0/mo.	Advanced \$175/mo.	Premium \$275/mo.
		At no cost with AT&T Dedicated Internet ¹ or AT&T Switched Ethernet Service on Demand with Internet Offload. ²	Pricing for up to 1 Gbps. Other speeds and pricing available. First two months of AT&T Dynamic Defense with your AT&T Dedicated Internet service at no cost. ^{3,4} After two months, plan will auto renew at the prevailing monthly rate unless canceled. Additional eligibility requirements and restrictions apply. See details below.
