Ethernet solutions built for business

What is Ethernet?
Ethernet delivers connections to new and existing services for ease of integration with your emerging applications:
• A universal technology with a familiar look and feel making it easy to connect and run
• Works the same in the LAN, MAN or WAN so it’s familiar and easy to deploy
• Supports bandwidth intensive applications like VoIP, Video, storage and data center consolidation

Multi-purpose network
Speed
• WAN speeds with multiple Gigabits
• Increase network capacity for heavy traffic loads

Productivity
• On-demand network for faster response times
• Simplify IT with a self-service portal

Control
• Customer controlled routing and IP addressing
• Manage and prioritize critical applications in-house

Network on Demand
Productivity
• On-demand network for faster response times
• Simplify IT with a self-service portal

Control
• Customer controlled routing and IP addressing
• Manage and prioritize critical applications in-house

Ethernet advantages

Speed
• WAN speeds with multiple Gigabits
• Increase network capacity for heavy traffic loads

Productivity
• On-demand network for faster response times
• Simplify IT with a self-service portal

Control
• Customer controlled routing and IP addressing
• Manage and prioritize critical applications in-house

Ethernet options

Switched Ethernet
• Connect locations together as if they were on one LAN
• Fully meshed or hub and spoke design

Dedicated Ethernet
• A two location connection that’s fast and highly secure
• High speed for constant exchange of information

Hybrid
• Combination of Ethernet WAN and as access to other networks
• Provides on-ramp to the Internet and VPN

Ethernet options

Handle more data, more bandwidth more end-points & bigger workloads

Why Ethernet?
AT&T Ethernet can grow with you from megabits to gigabits, from 2 sites to hundreds of sites.

Contact AT&T for more information or to help you put an Ethernet solution together for a more seamless and efficient network.
