

# VPN security and flexibility

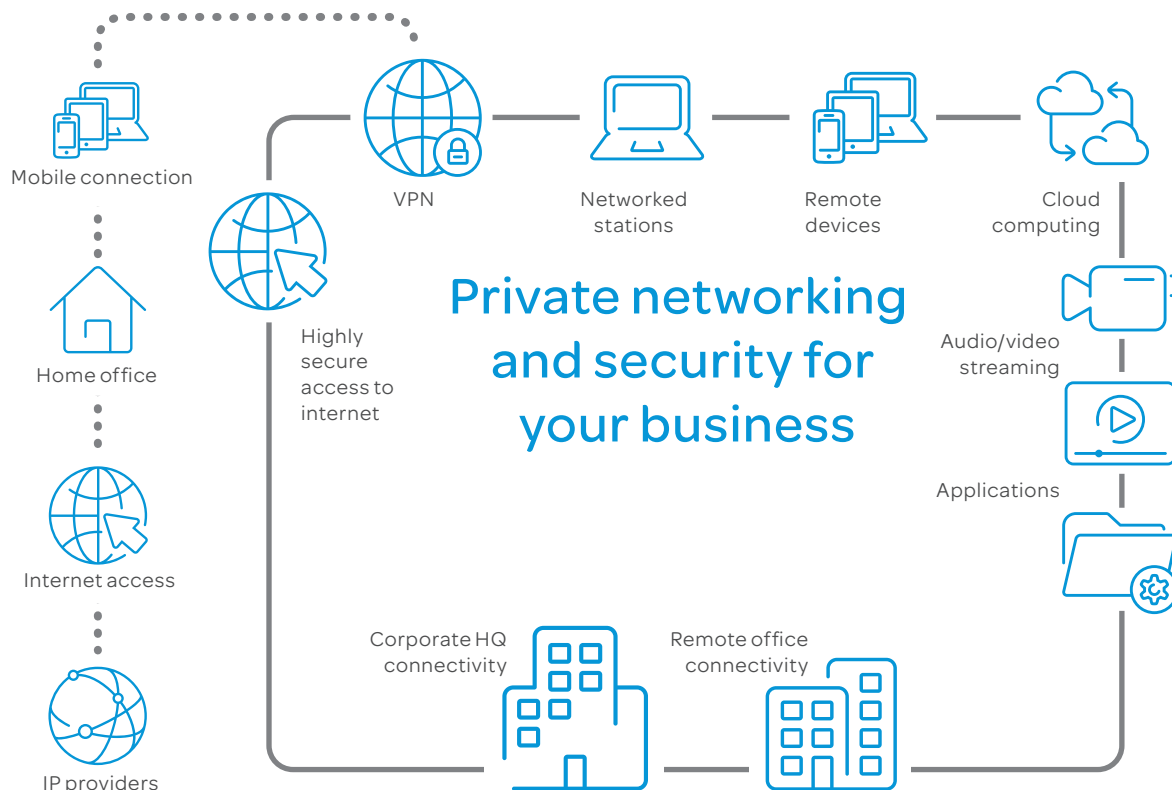

## What is a MPLS VPN?

Multiprotocol Label Switching (MPLS) is a standards-based technology used to prioritize the delivery of network packets creating a Virtual Private Network (VPN).

### Benefits

- Application awareness
- Scalability
- Agile, reliable, flexible any-to-any connectivity
- Easy access to reporting/tools
- Industry-leading service level agreements
- Meshed network with class of service
- Built-in disaster recovery

## Top 3 advantages of a MPLS VPN

Be connected virtually anytime, anywhere and with any device utilizing a single private IP network.

### Application enablement

- Compatible and flexible service components
- Easily add applications over IP
- Multiple access options

### Management capabilities

- Industry-leading custom visibility, control and command portal and tools
- Flexible management options
- On demand online resources

### Wireless integration

- Mobile devices are an extension of corporate VPN
- Remote access virtually anywhere, on any device
- Single global client, in many operating systems, with same user experience
