

Control your mobile data costs

Mobile management using AccessMyLAN from AT&T™

Manage your mobile workers more effectively by applying online access policies, saving money and driving productivity.

You want the productivity benefits of making your people more mobile with smartphones, tablets and laptops, but you can't run the risk of "bill shock" – the unexpected costs incurred when people exceed their data plan.

Mobile management puts you in control. A simple-to-use solution, it lets you set policies for each user to make sure they use their device for the benefit of the business. It's common for people to access non-business services that eat up data plan – streaming video and social media – so give yourself the ability to control it.

For just
\$9⁹⁹
per device,
per month,
you can:

Block websites
and applications

Set data
download limits

Control internet
access speeds

Simple

Set your own rules.
Monitor the results.

Affordable

No equipment to buy.
No support costs.

Secure

Locate, lock and wipe feature
protects devices and data.

Mobile management is a web-based service that is simple to deploy and easy to manage. You get full control for minimal expense – just the solution monthly subscription charge.

- No setup costs
- No hardware /software investment required
- Support services are free
- No contract
- No limits - Start with one device, and scale up to thousands.
