

# Your machines can work smarter

M2M using AccessMyLAN from AT&T™

## Wirelessly connect to remote machines and devices to extend your company's ability to track business processes or monitor critical assets, quickly and cost-effectively.

Machine-to-machine connectivity is changing the way companies go about their business – whether it's a critical oil drilling operation where you need to take pressure readings or a vending machine hundreds of miles away that needs to be restocked, connectivity is the key.

M2M brings this high-tech solution to smaller firms in a simple and cost-effective way. Any unmanned device can be given a private IP address and securely joined to your company network. It can change the way you interact with your customers or extend the reach of your business.

For just **\$9<sup>99</sup>** per device, per month, you can:

Maintain constant and secure contact with field based assets

Pull data automatically from unmanned devices and machines

Connect remote processes to physical or cloud servers

### Simple

Securely connect to any device at any location.

### Affordable

A simple cost per month model, no long term contracts or minimum site numbers, with full support included

### Fast

Deployment is quick and easy. A full M2M network created in minutes and infinitely scalable

## AccessMyLAN can help you to prototype, build and deploy M2M devices quickly & cost efficiently.

- No setup costs
- No hardware / software investment required
- Support services are free
- No contract
- No limits - Start with one device, and scale up to thousands.
