AT&T Frame Relay Service is an end-to-end, data network offering based on frame relay technology providing fast, efficient and reliable many-to-many connectivity enabling your critical applications. AT&T’s FR switching back-bone consistently maintains reliability, low congestion and consistent performance. Whether your requirements are for domestic connectivity within a single country or region, or you need a global network, AT&T’s global packet network is strategically positioned to connect your various locations.

AT&T Frame Relay Service will help you simplify your current networks and allow you to rapidly upgrade your bandwidth, connect your many sites and choose various capabilities with ease. For example, if you need more bandwidth outside the scope of AT&T Frame Relay Service you can subscribe to AT&T ATM Service, which uses the same Frame Relay/ATM core backbone platform.

Likewise, as you consider your Internet Protocol (IP) and Virtual Private Network (VPN) needs, AT&T Frame Relay Service has options such as AT&T IP-Enable Frame Relay Service to help you meet these needs while still maintaining your existing Frame Relay network.

The benefit of purchasing a Frame Relay Service is quite significant since you can keep your Frame Relay Service and pick and choose options that are available and customize your data networking solution whatever way you like. AT&T Frame Relay Service can grow with your company, every step of the way. You can rest assured that AT&T proactively monitors your service 24 hours, 7 days a week to ensure your applications run without any disruptions.

AT&T offers Service Level Agreements (SLAs) to support your expectations in the areas of delays, on-time provisioning, repair time, delivery rates and network availability. For example, the performance objective for U.S. network availability is 99.99%, and if AT&T does not meet this objective, the customer is entitled to a credit.

AT&T Frame Relay Service consists of Access, Ports, Permanent Virtual Circuits (PVCs), standard features, as well as options that you can choose from.

**AT&T Offers a Variety of Options to Enhance Your Frame Relay Service and Experience**

**Frame Relay Plus**

Allows you the ability to proactively monitor your service including fault resolution and near real-time and historical performance reports that pinpoint critical issues and causes.

**Integrated Network Connection Service**

Dynamically allocates unused capacity set aside for one application to applications that need extra bandwidth.

**Frame Relay to ATM Interworking**

Allows frame relay endpoints to communicate seamlessly with ATM endpoints.

**IP-Enabled Frame Relay/ATM**

Allows you to maintain the privacy of your frame network while establishing any-to-any access to the Internet, intranets and extranets.

**BENEFITS**

- **Performance** – The same switch platform enables seamless local and national to global connectivity.
- **Agility** – As your bandwidth requirements increase AT&T Frame Relay let’s you easily migrate your network by location, to higher speeds.
- **Control** – The same customer support organizations (ordering, maintenance, billing) for both local and national service.
- **Security** – We provide industry-leading SLAs that cover delay, throughput, availability, time-to-repair (in the U.S.) and service installation time. Our FR network availability guarantee is 99.99% with our agreements; you know you can trust that your critical data is quickly and reliably transmitted.

**FEATURES**

- Service Level Agreements.
- Reliability and network management capabilities.
- Customer network design and engineering support.
- Bursting capabilities enabled.
DSL Access to Frame Relay
Leverages the inherent private network security and performance of AT&T’s Frame Relay Service to broadband VPN needs without adding tunneling or encryption complexities.

Private IP Access Services
Allows you to take advantage of the AT&T dial infrastructure with the same security features provided by the AT&T Frame Relay Network.

Managed Router Service with Frame Relay Transport
Provides managed WAN solutions that manage routers, data communication equipment with AT&T Local Frame Relay Service and the transport.

Disaster Recovery Option (DRO)/Backup PVC
Allows a secondary PVC to be installed and made ready in the event of a disaster.

Switch Diversity Option (SDO)
Customer’s ports are provisioned on diverse FR switches. Customer can order up to 3 mutually exclusive groups of access ports. Diversity arrangements are maintained and guaranteed.

ISDN Dial Backup
Offers a reliable and cost-effective alternative for non-U.S. access back-up. It provides you with the appropriate resiliency for their dedicated leased line connections and improves the level of access availability.

Bundled Frame Relay Access
Allows the T1 Local Channel and the Frame Relay port to be combined into a single billed component, called an Access Port.

Web Tools
Online management of your AT&T Frame Relay Network improves your network efficiency and troubleshooting ability. AT&T’s web tools E-Order, E-Maintenance, E-Bill, provided through AT&T BusinessDirect® are right at your fingertips. Customer Network Management Service Web Reports are also available for analysis, trending and planning functions.

AT&T’s Frame Relay Network transmits a million CDs worth of information across the nation every single day. That same network regularly achieves a 99.99% performance rating.

Key Advantages
• Use logical connections between physical ports which is ideal for meshing networks or any-to-any connectivity
• You can integrate or migrate with other services with ease
• Ports and PVCs to meet your bandwidth requirements now and in the future
• High performing service with SLAs that target aggressive benchmarks but in the unlikely event that the network performs less than the targets, customers are entitled to credits
• Around-the-clock Network Operations Center (NOC) support to ensure your applications run smoothly
