TeleNav Asset Tracker from AT&T

Put the precision of GPS tracking to work for your business to get the most out of your field equipment and portable assets.

Easily Locate and Track Your Equipment and Other High-Value Assets
Increase your visibility into the field to help maximize the utilization of your resources. Enhanced by the capabilities of TeleNav’s award winning Web-based mobile resource management application, TeleNav Asset Tracker “continuously” reports the exact location of any item you attach it to.

It’s ideal for businesses that need to locate and track heavy machinery like front-end loaders or hydraulic lifts; generators, compressors, landscaping or rental equipment; even urgent or expensive shipments.

The Essential Tools to More Efficiently Manage Your Business
Business owners can better ensure that their assets are properly utilized in the field. Easily locate the nearest piece of equipment to a specific job site, reducing downtime and expensive transportation costs. Reduce unnecessary equipment rentals, and minimize late charges by making sure that items are returned on time.

Gain added piece of mind by knowing that your equipment is where it’s supposed to be. Losses associated with theft, unauthorized use, or vandalism can be reduced through automatic alerts when movement is detected outside of business hours, geofence boundaries are violated or other customizable triggers like stops and speeding.

Powerful
More than just points on the map, TeleNav Asset Tracker from AT&T includes powerful features like customizable landmarks, geofences and alert reporting that allow you to keep a close eye on your resources in the field.

View a detailed breadcrumb report, giving you an accurate record of the moves your asset or equipment has made. TeleNav Track provides many other reports, including stops, alert events and mileage that can also be downloaded in Adobe PDF and Microsoft Excel formats for expanded analysis.

Simple, Cost-Effective and Easy to Use
TeleNav’s Asset Tracker is a small, battery powered device and requires absolutely no installation. Forget lockboxes, black boxes or other complicated implementations, TeleNav Asset Tracker is water-resistant, rugged and ready to go at the touch of a button.

The application is 100% Web-based, there’s no need to purchase any costly software or servers. It’s very easy to use and TeleNav provides 24/7 live customer service.
