

Running a business is hard work, protecting it from cyber threats shouldn't be.

Norton™ Security for Professionals helps keep small businesses safe from even the most dangerous online threats. So businesses can continue to run with the ultimate piece of mind.

Many small business owners feel that they're too small to be a target of a cyberattack and may not have adequate IT support or malware protection on critical devices. This could put small businesses at risk because they are thought to be 'easy' targets and can also be used as a stepping stone to a bigger target.

Norton Security for Professionals brings together the intuitive experience of Norton protection with business-grade protection and a flexible subscription model allowing the business to manage growth and help ensure uninterrupted productivity.

Potential Benefits

- **Comprehensive coverage:** Includes business-grade protection for PCs, Macs, Android and iOS devices. Employees will be able to secure devices in the office and on the road without adding additional burden on IT support resources.
- **Scalable and Flexible:** Available as a subscription service and can be easily activated and deactivated as employees join or leave the organization. Employees can also self-manage by adding or removing their own devices as needed.
- **Cybercrime Prevention:** Protects employee devices from the latest malware, hackers, phishing and ransomware. By equipping employees with the right tools to help protect their devices, a business can help reduce the risk of being critically impaired by a cyberattack.
- **Ease of Use:** Easily provision users with the right tools to be productive and secure. Allows a small business to single source their user technology needs, streamlining the purchase and renewal process.

DESCRIPTION	MONTHLY CHARGE - PER USER
Norton™ Security for Professionals (up to 5 devices per user)	\$7.00
