Some of the biggest challenges in transportation come from things you can’t control: the price of fuel, regulatory requirements, highway safety, customer expectations or even the number of hours in a day. To meet these challenges head-on and to operate more productively, efficiently and safely, you need to know where your vehicles are, how your drivers are doing and what’s happening on the road – right now. Because the more you know, the faster you can act.

AT&T Fleet Management Solutions deliver the information you need when you need it. Real-time information you can put to work to cut fuel costs, avoid non-compliance problems, keep customers satisfied and reduce overtime while you get more done every day.

Through our consultative approach and deep industry knowledge, we design solutions that help any size or type of fleet – motor carriers, private fleets, taxi and livery services, and air and rail support operations – improve driver productivity; manage, track and monitor physical assets; optimize routes; streamline operations and lower costs.

Always Moving. Always Connected. Always Visible. AT&T Fleet Management solutions give you constant visibility into fleet operations, to help you become more productive, efficient and competitive.

Let us help you replace expensive satellite systems and wasteful paper processes with cost-effective mobile devices and technologies from your industry’s leading providers of fleet-management, navigation, route optimization and proof-of-delivery systems and software.

Drive Down Costs. Deliver More Profit. Labor and fuel are many fleets’ two biggest expenses. AT&T provides several ways to help you bring both of them under control.

Intelligent dispatching, for example, uses GPS-enabled location-based services to let you deploy the closest vehicle for a job and optimize routes, saving time, labor and fuel. When drivers take the fastest, most direct routes, they can complete more jobs per day, while staying in compliance with FMCSA Hours of Service regulations.

The ability to remotely monitor vehicles helps you pinpoint problems such as excessive idling, so you can save fuel and avoid fines.

Maximize Driver Productivity
Eliminating time-consuming paperwork and manual administrative processes reduces errors and frees drivers to focus on their core responsibilities. Dispatchers can send delivery schedules and manifests – complete with maps and directions – over-the-air, right to a driver’s cellular phone or other mobile device.

In field-service operations, drivers can collect job specifics such as inventory used, model numbers of equipment serviced and inspection results. Capturing customer signatures documents approval of work and proof of delivery. All can be transmitted into back-office systems.

Get Real Results From Real-Time Information
Here is just an idea of what you can accomplish when you capture location-based information through an AT&T Fleet Management Solution.

- Stay compliant with CSA and Hours of Service regulations. Electronic monitoring improves fatigue management and keeps drivers within allowable hours of service.
- Cut fuel consumption and costs. Reducing idling time by just one hour a day per truck, a fleet of 20 trucks could save over $25,000 a year.*
- Promote driver safety. Monitored drivers are safe drivers.
- Avoid fines. Depending on locality, fines for excessive idling can range from $150 to $25,000. Now you can optimize routes and encourage the good practices that minimize idling and the risk of penalties.
- Eliminate paper processes. Automated logs, timesheets and other paperwork can save drivers the 15 to 30 minutes per day it can take to fill out which adds up to big savings per year in driver productivity.
- Get more done at less labor cost. Improve efficiency enough to reduce overtime and trim overall payroll expenses.

*Assumes one gallon of diesel fuel consumed per hour when idling, $3.50 per gallon and 7-day workweek.

To learn more about AT&T Fleet Management Solutions, visit www.att.com/fleet-management or have us contact you.
Saving even more paperwork, drivers can use their mobile phones as wireless time clocks to submit geo-stamped and tamper-resistant time card information straight into your payroll system.

Likewise for log books. An AT&T solution can automate the most time-consuming parts of DOT Hours of Service reporting, CSA filings or IFTA state road use tax reports, meaning less work, data entry and overtime for office staff.

**Optimize Asset Utilization**

Application of real-time wireless data also enables you to manage vehicles and other assets more effectively.

Automatic reporting of vehicle condition lets you schedule routine preventive maintenance before expensive repairs put vehicles out of commission.

Real-time data on vehicle location – enhanced with the ability to remotely kill the engine – helps you avoid the fuel, insurance or liability costs of misuse or theft.

**Satisfy Your Customers**

In the end, everything you do is about serving the customer. AT&T Fleet Management Solutions give you the tools to improve response time and customer satisfaction.

Automated dispatch, for example, helps field service operations match the right vehicle to the requirements of any job. And while your competition may provide 4- or 8-hour windows, AT&T’s real-time location tracking lets you give customers a narrower and more reliable ETA for their delivery or service technician.

**Let Our Experience Put You On The Road To Savings**

To get the most from today’s location-based wireless solutions, you need a partner that can understand your business’s unique needs, provide a full spectrum of applications and devices, combine those into a solution that meets your goals and then stand behind the solution with services and support to assure durability and reliability.

Today, there’s no better partner for you than AT&T.

We’ve gained, refined and proved our expertise in wireless data solutions by working with customers through three generations of wireless technology.

Through our firsthand experience with transportation companies and in-depth research into logistics and supply chain operations, we’ve identified the business processes that benefit most from wireless enablement. Using our ROI tools to analyze your individual needs, we can design a wireless solution that will give you significant, quantifiable benefits – often paying for itself within a short timeframe.

**Start Realizing The Benefits Of Wireless**

AT&T Fleet Management Solutions can drive improvements throughout your fleet operation – from the back office, to the customer’s premises, to every mile you drive in between.
