

Enhanced Push-to-Talk

Connect your teams and power their productivity

The Enhanced Push-to-Talk platform from AT&T connects your workforce with voice collaboration at the push of a button. Powerful new features push the tool into today, equipping your teams and supervisors to deliver results while staying connected on-the-go, wherever they are, on almost any mobile device.

Collaborate in near real-time

Make group calls with up to 250 team members simultaneously with just the push of a button

Connect instantly with your team

Gain access to AT&T's expansive and reliable 3G, 4G, and 4G LTE networks

Use the devices that work best for you

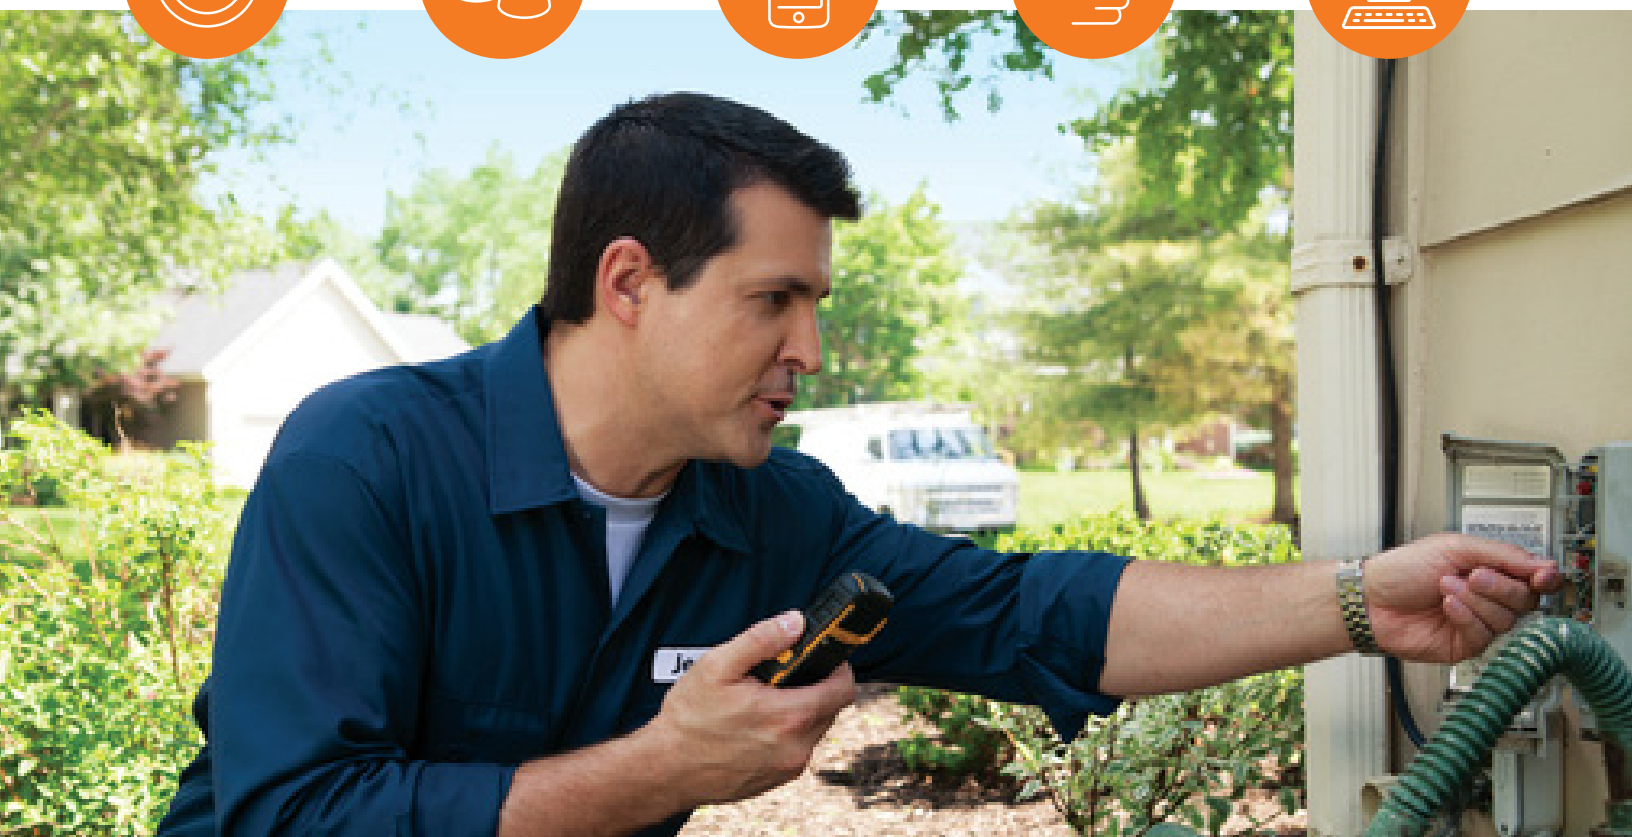

Choose from a wide range of smartphones, exclusive rugged phones and specialty devices

Simplify your team's workflows

Integrate EPTT into complimentary workforce management solution

Centrally managed solution

Manage devices in the field or conduct PTT calls directly from a computer

AT&T Enhanced Push-to-Talk

Collaborate with anyone, anywhere – one-to-one or one-to-many, with just one tap

Connect with the team members you need, the moment you need them. With AT&T Enhanced Push-to-Talk, you can see who's available and talk one-to-one or one-to-many. No call waiting. No phone tag. No voicemails. Just the active, near real-time information you and your teams need to stay on track and keep moving. Sub-second team connection is powered by the nation's strongest LTE signal and most reliable 4G LTE network¹ with the additional support of Wi-Fi, ensuring quick, dependable, and widespread coverage. That means teams can collaborate and work across meters or miles with a simple touch of a button.

All-in-one productivity, built on what you already have

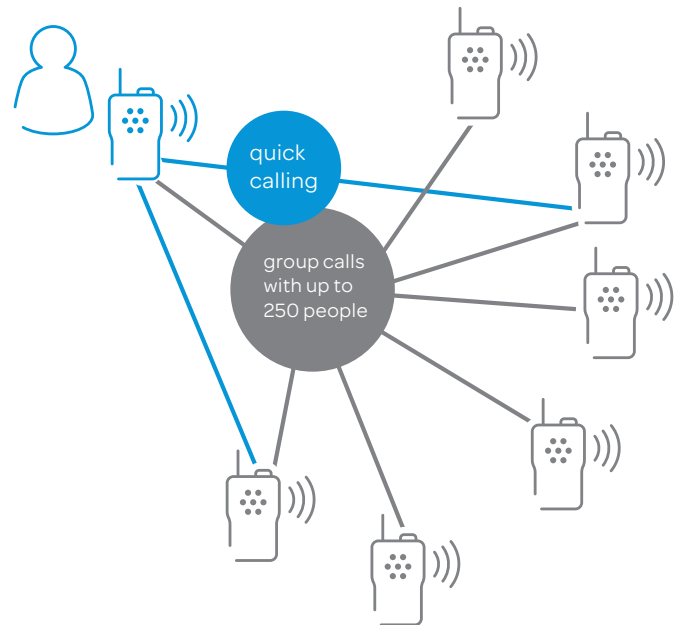

An all-in-one solution means everything your team needs is finally in one place. With Enhanced Push-to-Talk, your team can use the devices and platforms they're already familiar with and turn them into productivity powerhouses. Team members can choose from a wide range of smartphones, rugged phones, and specialty devices and accessories across all major mobile platforms, allowing each team member to work the way that works best for them.

And because Enhanced Push-to-Talk integrates into smartphones, your teams can combine multiple devices and functions into a powerful all-in one communication tool that switches between applications easily. That means more time is spent getting work done and not juggling equipment.

Make your workforce more effective

AT&T Enhanced Push-to-Talk is also built on an open API platform so it not only helps teams talk to each other, but it intuitively interfaces with other productivity applications, enabling seamless integration into industry applications you're already using, including dispatch, fleet management, GPS tracking, ticketing, field force automation, work order management, mobile forms, and mobile resource management.

We can also get Enhanced Push-to-Talk up and running fast, providing the know-how to integrate Push-to-Talk with the systems you already own, such as Wi-Fi, rapid response, or mobile radio (private/land), so you can pick up right where you left off, but with better capabilities than before.

Management made smart, simple, and easy with Integrated Dispatch

If you're a supervisor, you can now direct the action on the ground, from your desktop or laptop computer. Watch and guide your team with Integrated Dispatch, designed to let administrators locate and directly communicate to individual members or whole teams. You can remotely create ad hoc groups, record calls, and keep track of messages and alerts all from your console. For time sensitive communication, you can even override the channel to deliver important messages with a simple click of a mouse.

You can also remotely monitor and manage the actual devices and applications your teams use in the field in real-time. Set parameters, create contact lists (with up to 1,000 team members per group), connect your teams, and delegate control so you can sync, adapt, and move with the action in the field as it happens.

AT&T's Enhanced Push-to-Talk takes the field's most effective communication system and brings it into the next generation. Now you and your teams can get the instant and simple near real-time communication you need all in the devices that you want. Upgrade your field force with Enhanced Push-to-Talk today to fast track your productivity, cut costs, and create true collaboration.
