

# Product Brief

## AT&T Network-Based Firewall for AT&T NetBond®

Network-Based Firewall Service for NetBond provides additional security options for your network by integrating firewall functionality between your AT&T-provided Virtual Private Network (VPN) service and AT&T NetBond enabled Cloud Service Providers. This inline security service supports consistent pre-defined security policy management between your network infrastructure and your cloud partner interfaces. This allows you to see in and out traffic, monitor compliance, and be able to report on your active security posture, while adding another powerful layer to your overall defense strategy.

Our secure cloud networking solution provides:

- Enterprise-grade network security, performance and availability.
- Scalability and on-demand capabilities that delivers dynamic bandwidth flexing in tandem with the cloud resources.

- Multi-layered security for comprehensive protection.
- Added control for management simplicity, faster time to market, increased agility for IT services delivery and reduced capital outlay.

In order to help protect your data from intrusions into your network infrastructure, you need flexible, scalable and reliable security services. As part of a broader network and security strategy to manage and control company systems and information you should have a strong, highly secure, cost-effective solution. And this is where AT&T Network-Based Firewall service can help.

Think of the possibilities – reduce capital expenditures, decrease risk of technological obsolescence and the need for additional staff members – all with a solution that helps protect your data. With AT&T Network-Based Firewall service, you would subscribe to, rather

### Potential Benefits

Fortify the Network with Network-Based Firewall

- Inline security between your network and cloud partners
- Centrally manage security policies and user permissions in the cloud
- Conserve capital by utilizing pre-integrated cloud infrastructure

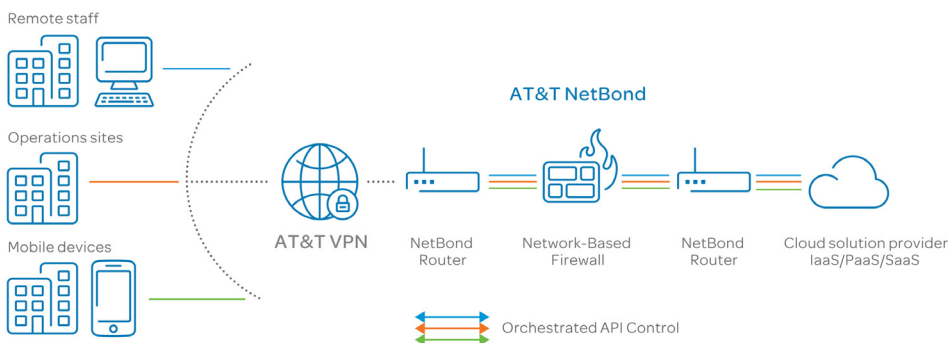

Easily Adjust Bandwidth as your Capacity Needs Grow

- Take advantage of near-global coverage and 24x7 monitoring

Centralized Management

- Adapt policies as compliance requirements change
- Provides customizable add-on features providing control over data passing to and from the cloud partners
