Network Integration
Africa, Asia Pacific, Canada, Europe, Latin America, Middle East, and North America

Network Integration
A global team with backgrounds in all forms of technology sales, telecommunications, and systems integration, incorporating subcontractors and business partners to innovate at the point of customer decision by bringing every aspect of what and who is available in the market to satisfy a customer need or challenge.

The Network Integration value proposition is unique in providing an end to end solution that builds on and complements what a customer already has or may be contemplating purchasing from AT&T. We are farther ahead of our traditional competitors in this model and are differentiated from regional network and global system integrators who do not have a core network as part of the offer. Gartner agrees and has positioned us in the leaders’ quadrant for Managed and Professional Services due to our strong integration business and the flexibility it represents. (at end of document)

Integration as a Service
Integration as a Service is a coordinated service integration platform designed to help customers connect and integrate best-of-breed service offerings and capabilities into their enterprise infrastructure. Network Integration uses the IaaS platform to present a new balance between risk and value, providing businesses with an efficient means for developing strategies to design, test, deploy and manage the process of service and capabilities integration. With the benefit of a well-established IaaS platform, our customers are connected to a robust catalog of services and capabilities, creating comprehensive solutions which include any or all of the following capabilities.

The Network Integration business makes the impossible possible, in a controlled and consistent way, for our account teams and for our AT&T customers.
AT&T a leader in the Gartner Magic Quadrant for Communications Outsourcing and Professional Services¹
