Security Consulting Services

Today’s businesses must be prepared to respond to increasingly sophisticated security threats and challenges. Meeting compliance and privacy regulations requires industry knowledge, security expertise, and considerable maintenance and management hours.

We assist organizations in security architecture design, assessment of defenses, implementation of controls, audit of procedures, issue resolution, response to incidents and breaches, regulatory compliance, improvement in maturity of security operations, and efficient IT Governance.

Information Security and Risk Management
We help organizations minimize risks, manage security operations effectively, and work toward achieving regulatory compliance. We enable organizations to proactively protect their critical information assets against emerging threats. We systematically evaluate technologies that help protect their data privacy and confidentiality, and assist in working toward continued compliance in the fast-changing threat landscape and regulatory environment.

Compliance is an important aspect of the overall information security program. However, the growing number of threats in today’s security landscape add pressure to the security staff to achieve success. To properly identify the correct compliance framework and policies models, regulations and technology solutions required to achieve a successful security program, takes time which most organizations do not have. We handle all these complexities for you by dealing with the convoluted and fragmented security environment and compliance requirements in your organization’s current security landscape.

Our services address regulations such as:
- PCI
- HIPAA/HITECH
- ISO 27001/27002
- FISMA/Fed Ramp
- GLBA

Security Operations
Security teams today are inundated with alerts and information from a growing number of siloed point solutions. In parallel, attacks via both known and unknown vulnerabilities continuously target critical business services, IT infrastructure, and users. These incidents and vulnerabilities lack business context, making it difficult to know which ones pose the greatest threat to the organization. Furthermore, manual processes and cross-team handoffs hinder the security team’s ability to efficiently respond to attacks or assess and remediate vulnerabilities.

An even more fundamental question for an organization’s security is “Are we protected, and are things getting better or worse?” While there is no simple answer, most organizations struggle to establish baseline metrics for their security posture that they can track over time. Without this understanding, they lack the ability to strengthen the infrastructure and improve their response. The result? Detection and response times that are measured in months, and missed attacks which could lead to an eventual breach or compromise.
Security Response
Whether or not your organization is prepared, security breaches have become common occurrences. Sometimes, the bad guys win, and security measures occasionally fail to prevent an incident. AT&T has experts in incident response, forensics and analysis who can support electronic discovery who can support or supplement your team when suspected unauthorized, illegal or malicious activities are detected or you are ready to develop a comprehensive plan so you are prepared in the event of a breach. We also offer incident response retainer services that allow a company to enter into a contract for services in the event of a suspected or confirmed information security incident. With a retainer in place, an organization has a trusted entity on standby to call in the event of a security breach. This proactive approach can help to significantly decrease response time and reduce the impact of a security incident, including theft of sensitive data.

AT&T has a long history of developing and managing security services that support a multi-layered architecture to help with your security policies. AT&T security consultants have experience handling large, complex infrastructure solution deployments. We follow industry best practices and a standardized methodology to help reduce risks and speed deployment of your end-to-end security solution.

AT&T Consulting can help you:
• Connect Security and IT
• Drive Faster, More Efficient Security Response
• Know Your Security Posture
